

How to use Malwarebytes Anti-Malware:

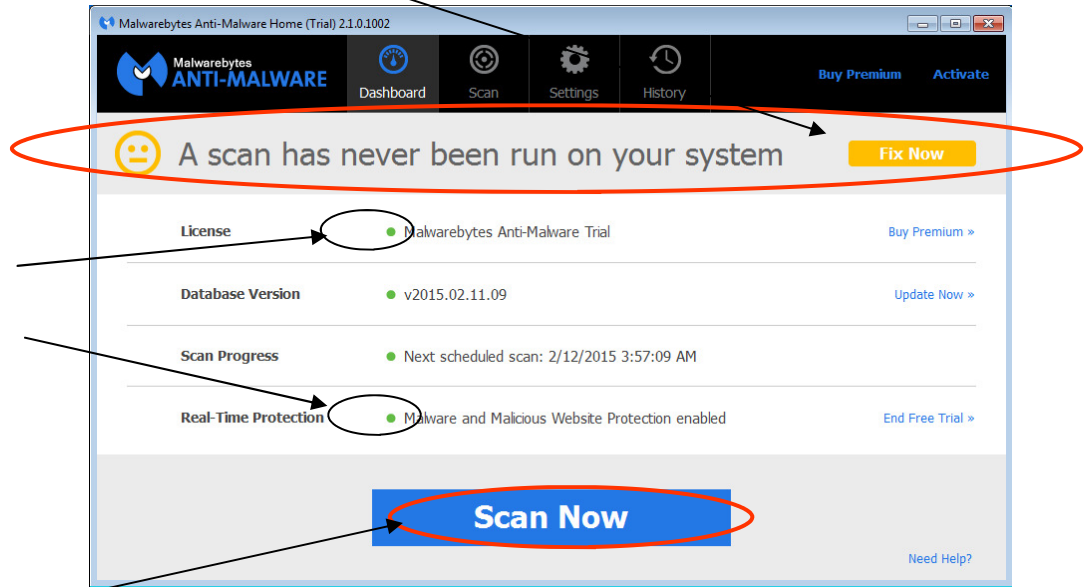

1. Start you Malwarebytes application by 2x (left) clicking on your icon on your desktop.
The user account control may ask for permission to run. Click **Yes**.

2. Click "Fix Now"

When opening the program will check its status. It will identify needed tasks at the top. Often you will see "Your databases are out of date. Or that a scan needs to run...Click "Fix Now"

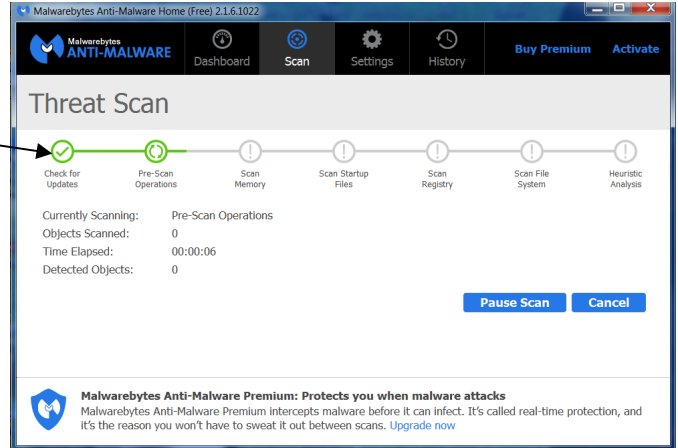

Notice that your version has two red X's ... that is because you are using the free version!
It is ok.

3. Click "Scan Now"

Start the scan if not running by then click on the scan now button!

4. Malwarebytes will now start scanning your computer for malware. This process can take quite a while. When Malwarebytes is scanning it will look like this!

5. Check the boxes and Click "remove Selected"
Malwarebytes will list problems found. Make sure there is a check in each box. Then click "Remove Selected"

6. The program will ask to restart the computer Click "yes" and the computer will restart.

Your done!!!!
